Algorithms Lab Assignment 1

Pranav Gade

February 5, 2022

Batch: CS&AI
Roll no.: LCI2020010

1 Insertion sort

Analysis of Insertion sort complexity.

1.1 Code

```c
#include <time.h>
#include <stdlib.h>
#include <stdio.h>

void sort(int* arr, int size);

int main(int argc, char** argv) {
    int size = atoi(argv[1]);
    int* arr = malloc(sizeof(int) * size);
    for (int i = 0; i < size; ++i) {
        arr[i] = rand();
    }

    clock_t start = clock();
    sort(arr, size);
    clock_t diff = clock()-start;

    printf("%ld", diff);

    free(arr);
    return 0;
}

void sort(int* arr, int size) {
    for (int i = 0; i < size; ++i) {
        int curr = arr[i];
        int j = i-1;
        while (arr[j] > curr && j >= 0) {
            arr[j+1] = arr[j];
            j--;
        }
        arr[j+1] = curr;
```

```
    }
}
```

1.2 Output

```
[p@claret sem4_algos]$ ./cmake-build-debug/insertionsort 100000 # prints time(in us) taken to run insertion sort on 100000 elements
3480857
```

1.3 Graph

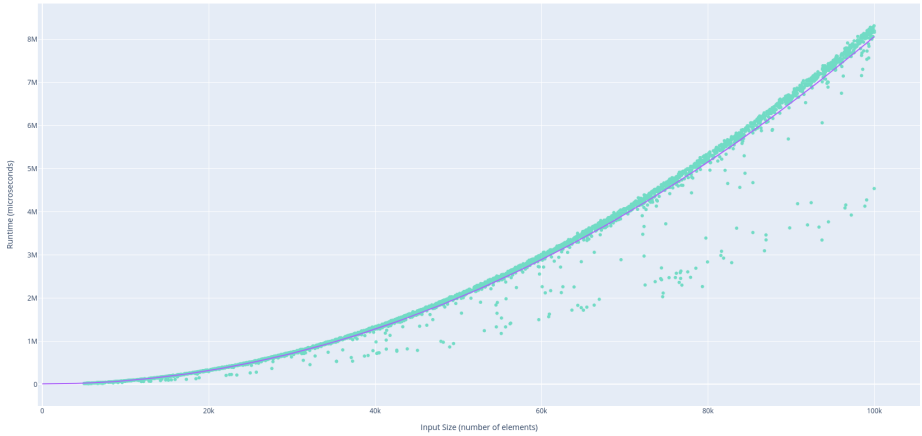

Figure 2: Insertion sort runtime v/s size plot

2 Selection sort

Analysis of Selection sort complexity.

2.1 Code

```c
#include <time.h>
#include <stdlib.h>
#include <stdio.h>

void sort(int* arr, int size);

int main(int argc, char** argv) {
    int size = atoi(argv[1]);
    int* arr = malloc(sizeof(int) * size);
    for (int i = 0; i < size; ++i) {
        arr[i] = rand();
```

```
    }

    clock_t start = clock();
    sort(arr, size);
    clock_t diff = clock()-start;

    printf("%ld", diff);

    free(arr);
    return 0;
}

void sort(int* arr, int size) {
    for (int i = 0; i < size-1; ++i) {
        int idx = i;
        for (int j = 0; j < size; ++j) {
            if (arr[idx] > arr[j]) idx = j;
        }
        int t = arr[idx];
        arr[idx] = arr[i];
        arr[i] = t;
    }
}
```

2.2 Output

```
[p@claret sem4_algos]$ ./cmake-build-debug/selectionsort 100000 # prints time(in us) taken to run insertion sort on 100000 elements
10217218
```

3 Bubble sort

Analysis of Bubble sort complexity.

3.1 Code

```c
#include <time.h>
#include <stdlib.h>
#include <stdio.h>

void sort(int* arr, int size);

int main(int argc, char** argv) {
    int size = atoi(argv[1]);
    int* arr = malloc(sizeof(int) * size);
    for (int i = 0; i < size; ++i) {
        arr[i] = rand();
    }

    clock_t start = clock();
    sort(arr, size);
    clock_t diff = clock()-start;

    printf("%ld", diff);

    free(arr);
    return 0;
}

void sort(int* arr, int size) {
    for (int i = 0; i < size-1; ++i) {
        for (int j = 0; j < size-i-1; ++j) {
            if (arr[j] > arr[j+1]) {
                int t = arr[j+1];
                arr[j+1] = arr[j];
                arr[j] = t;
            }
        }
    }
}
```

3.2 Output

```
[p@claret sem4_algos]$ ./cmake-build-debug/bubblesort 100000 # prints time(in us) taken to run insertion sort on 100000 elements
19317525
```
